

THE GATE THAT DELIVERS RESULTS

EDSCO Pro-Series™

BUILT ON THREE DECADES OF EXPERIENCE

As the industry's top performing gate, our EDSCO Pro-Series™ gate provides everything you need to deliver your product time and time again. Single-handle operation makes it easy for one operator to control product flow for fast, efficient unloading, while a refined design provides high product integrity, low maintenance requirements, and proven performance.

AT A GLANCE

- Clean bore, no-ledge design delivers a material flow that's free of obstructions
- 30° slope promotes enhanced product flow and complete clean out
- A stiffer, more rigid flange design reduces gaps to eliminate pellet entrapment
- Valve design provides dual operating modes for unloading and clean out, eliminating unintentional clean out
- Interchangeable and compatible parts with other EDSCO™ models reduces your parts inventory
- Enclosed operating mechanism prevents rod damage and corrosion
- One-piece center supported valve rod decreases deflection to protect against product contamination
- One-piece adapter gasket requires only one person for gate tear down
- Under pan valve requires less torque when operating

As North America's premier provider of comprehensive railcar solutions, more companies rely on *TrinityRail's* expertise than any other. Thanks to our integrated platform of railcar products and services, we're able to provide your business with the single source you need for true peace of mind.
